Fort Wayne, IN | +1 (260) 348 8496 | [kalranainaa2@gmail.com](mailto:kalranainaa2@gmail.com) | [www.linkedin.com/in/kalranainaa/](https://www.linkedin.com/in/kalranainaa/) | [www.github.com/NainaKalra](https://www.github.com/NainaKalra)

## PROFESSIONAL SUMMARY

Computer Science student at Indiana Institute of Technology with hands-on experience in front end development, backend systems, and web application design. Proficient in Python, C++, JavaScript, SQL, and React, with experience building scalable applications, REST APIs, and data-driven solutions.

## EDUCATION

**INDIANA INSTITUTE OF TECHNOLOGY** | *Dean's List* | *Honors College*  
*Bachelor of Science in Computer Science, Minor in Cybersecurity* | **3.9 GPA**

**FORT WAYNE, INDIANA**  
May 2028

## PROJECTS

**CareBridge** | *Python, React, Firebase*

June 2026- Present

- Designed and built an **accessibility-first mobile app** for elderly users using React, Python, and Firebase, with real-time data sync and intuitive UI focused on dignity and ease of use.
- Architected the full-stack system from scratch with structured backend logic, authentication flow, and component hierarchy, resulting in a scalable, maintainable codebase actively in development.

**Virus Outbreak Management System** | *C++, Data Structures and Algorithms*

April-May 2026

- Implemented a menu-driven outbreak simulation in C++ using BSTs, stacks, queues, linked lists, and priority queues to handle patient tracking, testing, and contact tracing across **100+ records**.
- Applied **5+ advanced DSA structures** to design an efficient system managing complex data relationships and real-time patient prioritization.

**Gold Price Prediction** | *Python, XGBoost, Scikit-Learn*

Feb -May 2026

- Built a machine learning model using Python, XGBoost, and Scikit-learn to predict gold prices from historical market data, applying feature engineering and model evaluation techniques.
- Achieved prediction accuracy surpassing most existing gold price models, validating the approach through rigorous testing with Pandas, Matplotlib, and Seaborn.

**JavaScript Mini Projects** | *HTML, CSS, JavaScript*

Jan 2026 - Feb 2026

- Built **6 JavaScript games and browser clones** using vanilla JS and DOM manipulation, exploring event handling, state management, and dynamic rendering.
- Each of the projects was scoped and completed independently, producing fully functional, framework-free interactive web experiences.

## EXPERIENCE

**Summer Camp Counsellor** | *Indiana Institute of Technology*

May 2026 - Present

- Worked across 5 camps with **100+** middle and high school students, designing activities, teaching Python and AI tools, and running hands-on robotics activities.
- Delivered structured, engaging sessions across diverse age groups, resulting in students independently building and presenting their own projects by end of camp.

**Peer Tutor** | *Indiana Institute of Technology*

Jan 2025 - Present

- Provided one-on-one tutoring in Python, Algebra, Trigonometry, Calculus I & II, Intro to Computer Science, CS1, CS2, and Server Systems, breaking down complex concepts through structured explanations and collaborative debugging.
- Consistently improved student performance by **15%** across sessions by identifying individual gaps and adapting teaching approach to each student's learning style.

**Girls Tech Takeover Program Lead** | *Afterschool Program*

Fall 2025 - Present

- Led weekly coding sessions for **10** middle school girls, teaching Python fundamentals through hands-on projects including building a fully functional game from scratch.
- Designed lesson plans around problem decomposition and debugging, resulting in students independently writing and debugging their own Python code by end of program.

## LEADERSHIP & ACTIVITIES

**President** | **Women in Science and Engineering** | *Indiana Institute of Technology*

October 2025 – Present

- Organized tech events and built an inclusive space for everyone and women in STEM on campus. Designed and built the official WISE club website using HTML, CSS, and JavaScript to connect and represent members across campus.

## SKILLS

- Languages** Python, C, C++, HTML5, JavaScript, CSS3
- Tools & Frameworks** React.js, Node.js, Flask, Three.js, MySQL, MongoDB, Firebase, Docker, Git, REST APIs
- Operating System** Linux, Ubuntu, MacOS, Windows
